APPLICANT: Milliams, Spencer J.

APPLICANT: Milliams, Spencer J.

APPLICANT: Mougous, Joseph

TITLE OF INVENTION: Mycobacterial Sulfation Pathway Proteins

TITLE OF INVENTION: Methods of Use Thereof

FILE REFERENCE: BERK-012CIP

CURRENT APPLICATION NUMBER: US/10/286,606

CURRENT FILING DATE: 2002-10-31

PRIOR APPLICATION NUMBER: 60/285,394

PRIOR APPLICATION NUMBER: 60/345,953

PRIOR APPLICATION NUMBER: 60/345,953

PRIOR APPLICATION NUMBER: 10/126,279

PRIOR APPLICATION NUMBER: 10/126,279

PRIOR FILING DATE: 2002-04-19

NUMBER OF SEQ ID NOS: 58

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 11

LENGTH: 1392

TYDE: DNA

ORGANISM: Mycobacterium avium

FRATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ; FEATURE:

         /clone lib="CUGI Rice BAC Library"
/note="Vector: pBeloBAC11; Site 1: HindIII; Site 2:
HindIII; Rice is one of two most popular grains in the
world. Half of the world population especially those
inhabiting highly populated areas of the humid tropics
and subtropics, rely on rice as their primary source of
carbohydrate. Monocotyledonous rice is a diploid plant
(2n=24) with a haploid genome equivalent of 431 Mbp
(Arumuganathan and Earle, 1991). The relatively small
genome of rice, three times larger than that of
Arabidopsis, makes it suitable for genomic studies. In
order to facilitate positional cloning, physical mapping
and genome sequencing of rice, we have constructed a BAC
library from Oryza sativa, Nipponbare variety. The
library contains 36,864 clones with an average insert size
of 128.5 Kb providing 10.9 haploid genome equivalents. The
deep coverage allows the isolation a particular sequence
with a probability of 99.9 %. Two high density filters,
each containing 18,432 clones (doubly spotted), represent
the whole library for colony screening."

/note="Vector: p2ero-2 (Invitrogen); Site 1: EcoRV;
Genomic DNA was isolated from stationary phase cells. For this library, DNA was sheared to give a tight size distribution of 1-1.5kb fragments, blunt-ended with T4 DNA polymerase, dephosphorylated with Shrimp Alkaline phosphatase and ligated into p2ero-2 vector's EcoRV site."
